

I claim:

1. A plant root and bulb protection device comprising:
 - a. a continuous tubular sheet liner, wherein the tubular sheet liner circumscribes
 - i. an interior side;
 - ii. an exterior side;
 - iii. a closed bottom end;
 - iv. an open top end; and
 - b. wherein the tubular sheet line comprises a plurality of apertures between the interior side and the exterior side.
2. The plant and root bulb protection device of claim 1, further comprising a closure means, capable of enclosing the top end.
3. The plant and root bulb protection device of claim 1, further comprising an anchor means, capable of securing the tubular sheet liner to the ground.
4. The plant and root bulb protection device of claim 2, wherein the closure means is capable of reversible enclosing the top end.

5. The plant and root bulb protection device of claim 2, wherein the closure means is a tie.
6. The plant and root bulb protection device of claim 1, wherein the device further comprises a plurality rows of apertures extending generally from the top end to the bottom end.
7. The plant and root bulb protection device of claim 1, wherein the plurality of apertures further comprises a plurality of diagonally shaped apertures.
8. The plant and root bulb protection device of claim 1, wherein the plurality of apertures further comprises alternating rows of diagonally shaped apertures wherein the diagonal shape is generally oriented from the top end to the bottom end in a left to right direction in a first row and wherein the diagonal shape is generally oriented from the top end to the bottom end in a right to left direction in a second row.
9. The plant and root bulb protection device of claim 1, wherein the apertures are capable of preventing passage of vermin from the exterior side to the interior side and wherein the aperture is capable of permitting

passage of water from the exterior side to the interior side.

10. The plant and root bulb protection device of claim 1, wherein the liner sheet is comprised of plastic.
11. The plant and root bulb protection device of claim 1, wherein the liner sheet is biodegradable.
12. The plant and root bulb protection device of claim 1, wherein the liner sheet is non-biodegradable.
13. A method for protecting plant roots and bulbs comprising insertion of a plant into the plant and root bulb protection device of claim 1 and insertion of the device into the ground.
14. The method for protecting plant roots and bulbs of claim 13, further comprising insertion of soil into the device of claim 1.
